

Table 12.E1 Performance of prediction models for response in HBV patients with and without interaction terms

Model	C statistic	
	Apparent	Bootstrap validated
Main effects	0.689	0.648
+interaction genotype * ALT	0.721 (ML)	0.673
	0.719 (PML)	0.675

* ML: Maximum likelihood; PML: penalized maximum likelihood
